Audience Handout · Using AI in Our Lives

"Using AI in Our Lives" — try these yourself, all free

This is your follow-along guide to the four live demos. Every tool is free, and every prompt below is copy-paste ready. You don't need to keep up during the session — take this home and run each demo at your own pace. **Total: ~8 minutes of demos.**

Before you start (optional, to follow along): have a Google account handy (for NotebookLM, Gmail, Calendar) and sign up free at gamma.app and canva.com.

Demo 1 — Turn messy notes into a stunning slide deck (~2 min)

Tool: [Gamma](https://gamma.app) (free) · Alternatives: Canva Magic Design, ChatSlide

Steps

1. Open Gamma **Create new** **Paste in text**.
2. Paste in any notes you have (lecture notes, meeting notes, a rough outline).
3. Set it to **8 cards**, tone "**Professional & friendly**", and paste the prompt below.
4. Click **Generate** — a designed deck appears in about 30 seconds.
5. Change the **Theme** at the top to instantly restyle the whole deck.

Prompt (paste into the instructions box):

Turn the notes I pasted into a clean, engaging 8-slide presentation for a general adult audience. Requirements:

- Slide 1: a punchy title slide with a one-line hook.
- One clear idea per slide, max 6 words per bullet, max 4 bullets per slide.
- Rewrite my rough notes into confident, plain-English headlines.
- Add one relevant image or icon per slide.
- End with a "3 things to try tonight" takeaway slide.
- Keep all facts strictly to what's in my notes; do not invent statistics.

Remember: re-check any facts and match your own colours before presenting.

Demo 2 — Turn your study notes into a quiz + a podcast (~2 min)

Tool: [NotebookLM](https://notebooklm.google.com) (free with any Google account)

Steps

1. Open NotebookLM **Create notebook** upload a reading (PDF, doc, or even a YouTube link).

2. In the **Studio** panel, click **Study guide**, **Quiz**, or **Flashcards** — generated in seconds.
3. Ask questions in the chat; every answer cites the exact line in your source.
4. In **Studio**, click **Audio Overview** to create a two-host podcast of your notes. (*This takes a few minutes to generate.*)

Prompt (paste into the chat):

From my source, create a 5-question self-test that gets progressively harder, then hide the answers below a line so I can check myself afterwards. Focus on the concepts I'm most likely to be examined on, and cite the section each question comes from.

Study-as-a-tutor prompt (bonus):

Act as my tutor for this material. Explain "encoding vs. retrieval" using a simple everyday analogy, then ask me two questions to check I understood. Do not give me the answers until I respond.

Remember: NotebookLM only uses what you upload — feed it good sources.

Demo 3 — Draft an email Calendar event Meet link (~2 min)

Tools: [Gemini app](#) + Gmail + Google Calendar + Google Meet (all free)

Steps

1. In the free **Gemini app**, paste **Prompt A** to draft a meeting invitation email.
2. Paste that draft into a new email in **Gmail**. Because it names a date/time, Gmail shows "**Add to Calendar**" — click it and the event auto-fills.
3. Open the event in **Google Calendar** **Add Google Meet video conferencing** **Save**. The Meet link goes out with the invite.
4. Back in Gemini, paste **Prompt B** to get an agenda and talking points.

Prompt A — draft the invite:

Write a short, friendly meeting invitation email.
Purpose: kick-off for our "AI in Our Lives" learning session.
Attendees: my team (5 people).
Proposed time: next Tuesday 3:00–3:45 PM.
Include: a one-line purpose, a 3-bullet agenda, and a line saying a Google Meet link is attached. Keep it under 120 words, warm but professional.

Prompt B — meeting prep:

Create a 45-minute agenda for the session above with rough timings, 3 discussion questions to open the room, and a list of what I should prepare beforehand.

Good to know: the deepest features (auto-finding times across colleagues' calendars, automatic Meet notes) need a paid Google Workspace plan. The steps above all work on a **free** account.

Demo 4 — Create a poster / EDM from a description (~2 min)

Tools: [Canva](#) (editable) · [Ideogram](#) (text-in-image) · Microsoft Designer (free alt)

Steps

1. Open Canva search "**Poster**" **Design with AI / Magic Design**.
2. Paste the prompt below.
3. Pick a layout — it opens fully editable. Change the date, colours, or text in seconds.
4. **Download** as PNG/PDF. Use Canva **Resize** to make an email-header version for an EDM.

Prompt (Canva):

Create a modern, eye-catching event poster (portrait) for a staff learning session.
Title: "Using AI in Our Lives"
Subtitle: "A hands-on 45-minute session — free tools only"
Details to include: Date [Fri 22 Aug], Time [3:00 PM], Venue [Training Room 2],
"Bring your laptop."
Style: clean, friendly, tech-forward; blue and teal palette; lots of white space;
one simple AI/lightbulb motif. Leave text fully editable.

Prompt (Ideogram — if you want the headline baked into the artwork):

A vibrant, modern event poster with the bold headline text "USING AI IN OUR LIVES" clearly readable at the top, subtitle "Free tools, real results — 45-min session" below. Flat vector illustration style, blue and teal, a glowing lightbulb made of circuit lines, plenty of clean space. High legibility text.

Remember: proofread every word in AI-generated images, and note free tiers usually can't be used commercially and may add a watermark.

The 4 free tools worth installing tonight

Job	Tool
Everyday questions, drafting, travel	ChatGPT or Google Gemini
Study & understanding documents	NotebookLM
Posters, EDMs, simple video	Canva
Presentations	Gamma

Two golden rules: AI can be confidently wrong — verify what matters. And free is not private — never paste passwords, ID numbers, or confidential data.
