

Live Demo Runbook

PRESENTER Cockpit (Confidential) · Using AI in Our Lives

"Using AI in Our Lives" — full operational guide

This is your cockpit. It has everything the audience handout has, PLUS: pre-session setup, minute-by-minute timing with cues, exact narration, wow-moment callouts, transitions, fallbacks, and troubleshooting. Do **not** distribute this version.

Companion files: slide script 01-presentation-with-speaker-notes.md ; source content demo-materials/ ; audience copy 04-demo-runbook-AUDIENCE.md .

Demo placement in the deck: Demo 1 Slide 9 · Demo 2 Slide 11 · Demo 3 Slide 13 · Demo 4 Slide 17.

Total live demo budget: ~8 minutes (4 × ~2 min), inside the 45-min session.

PART A — Pre-session setup (do the morning of, ~15 min)

A1. Accounts & logins (log in NOW, stay logged in)

- [] **Gamma** (gamma.app) — logged in, on the dashboard.
- [] **NotebookLM** (notebooklm.google) — logged into the Google account you'll use.
- [] **Gmail + Google Calendar** — same Google account, open in tabs.
- [] **Gemini app** (gemini.google.com) — logged in.
- [] **Canva** (canva.com) — logged in. (Optional: Ideogram, Microsoft Designer.)

A2. Pre-generate the slow assets (CRITICAL)

- [] **Demo 2 Audio Overview** — upload demo-materials/demo2-study-source.md to a NotebookLM notebook and **generate the Audio Overview now**. It takes several minutes; never do it live. Leave the notebook open on the Studio tab, audio ready to play.
- [] **Demo 4 comparison** — optionally pre-make one Ideogram poster so you can contrast it with the live Canva one.

A3. Fallback safety net (open each in its own browser tab)

- [] Demo 1: a **finished Gamma deck** you generated earlier.
- [] Demo 2: the **downloaded audio file** + a screenshot of a generated quiz/study guide.
- [] Demo 3: a **45-second screen recording** of the full Gmail Calendar Meet flow (email demos are the most fragile — record this backup).
- [] Demo 4: a **pre-made Canva poster** + **pre-made Ideogram poster**.

A4. Room & display

- [] Browser zoom **125–150%** so the back row can read prompts.
- [] Close notification-heavy apps (Slack/email popups on screen = bad look).
- [] Have `demo-materials/` files open to copy-paste prompts fast.
- [] Test audio output for Demo 2 through the room speakers.

A5. Edit before presenting

- [] In the poster prompts, replace `[Fri 22 Aug]` , `[3:00 PM]` , `[Training Room 2]` with your real details.
- [] Decide who Demo 3's invite is "to" (yourself is safest for a live send).

PART B — Timing map

#	Demo	Slide	Target duration	Hard cap	Must pre-gen?
1	Notes slides (Gamma)	9	2:00	2:30	Fallback deck
2	Study notes quiz + podcast	11	2:00	2:30	YES — audio
3	Gmail + Calendar + Meet	13	2:00	2:30	Screen recording
4	Poster / EDM	17	2:00	2:30	Compare poster

If you're running behind: shrink Demo 4 to just showing the generation + one edit (skip the Ideogram compare). Never cut Demo 2's audio — it's the biggest wow.

DEMO 1 — Notes stunning deck (Slide 9) · Target 2:00

Setup state: Gamma dashboard open. `demo-materials/demo1-source-reading.md` copied to clipboard.

Run (with timing cues):

- **0:00–0:20** — "I've got a page of rough notes here — the kind of mess we all jot down." Create new **Paste in text** paste notes.
- **0:20–0:35** — Set **8 cards**, tone **Professional & friendly**, paste the prompt (below). Hit **Generate**.
- **0:35–1:20** — *While it generates, keep talking:* "Notice it's not just dumping text — it's choosing layouts, pulling images, writing headlines."
- **1:20–1:45** — Deck appears. Scroll through 2–3 slides.
- **1:45–2:00** — **WOW:** change the **Theme** at the top. "Building this by hand is an afternoon. That was 40 seconds." Then: "I'd re-check facts and match our brand — minutes of polish, not hours of building."

Prompt (Gamma instructions box):

Turn the notes I pasted into a clean, engaging 8-slide presentation for a general adult audience. Requirements:

- Slide 1: a punchy title slide with a one-line hook.
- One clear idea per slide, max 6 words per bullet, max 4 bullets per slide.
- Rewrite my rough notes into confident, plain-English headlines.
- Add one relevant image or icon per slide.
- End with a "3 things to try tonight" takeaway slide.
- Keep all facts strictly to what's in my notes; do not invent statistics.

Say the caveat aloud: "It can produce generic images or over-confident wording — you stay the editor."

Troubleshooting:

- *Slow/stuck generating* switch to your pre-made deck tab; narrate as if planned.
- *Login dropped* have Gamma open and authenticated before you start; never log in live.
- *Bad output* that's a teaching moment: "See? First draft, not final — this is why we edit."

Transition to next: "That's creating. Now let's talk about *learning* — for the students in the room."

DEMO 2 — Study notes quiz + podcast (Slide 11) · Target 2:00

Setup state: NotebookLM notebook open with `demo2-study-source.md` uploaded and **Audio Overview** already generated.

Run (with timing cues):

- **0:00–0:25** — Show the uploaded source. Point at **inline citations**: "Every answer links to the exact line, so it doesn't make things up — unlike a normal chatbot."
- **0:25–0:55** — In **Studio**, click **Study guide** (or **Quiz**). Read one generated quiz question aloud.
- **0:55–1:25** — Paste the chat prompt (below); show the cited, grounded answer.
- **1:25–2:00** — **WOW:** play **15–20 seconds** of the pre-generated **Audio Overview**. "That's your own lecture notes, as a podcast you revise to on the bus." Stop the audio cleanly.

Prompt (NotebookLM chat):

From my source, create a 5-question self-test that gets progressively harder, then hide the answers below a line so I can check myself afterwards. Focus on the concepts I'm most likely to be examined on, and cite the section each question comes from.

Optional tutor prompt (only if time):

Act as my tutor for this material. Explain "encoding vs. retrieval" using a simple everyday analogy, then ask me two questions to check I understood. Do not give me the answers until I respond.

Say the caveat aloud: "It stays inside your sources — great for trust, but it won't add outside context unless you ask."

Troubleshooting:

- *Audio won't play in-app* play the downloaded audio file; or if all else fails, describe it and show the

quiz screenshot.

- *Quiz slow to generate* you can pre-generate the study guide too; screenshot as backup.
- *Chat limit reached (free = ~50/day)* don't burn queries rehearsing on the same account you'll present with; use a second account for practice.

Transition to next: "Learning, sorted. Now the thing that eats everyone's mornings — email and meetings."

DEMO 3 — Gmail + Calendar + Meet (Slide 13) · Target 2:00

Setup state: Gemini app, Gmail, and Google Calendar each open in a tab. Optional: the sample "incoming email" from `demo-materials/demo3-email-scenario.md` already sent to yourself.

Honesty framing (say up front): "Everything here works on a FREE personal account. The deepest automation — finding slots across colleagues' calendars, auto Meet transcription — is paid Workspace. I'll be clear about the line."

Run (with timing cues):

- **0:00–0:30** — In **Gemini**, paste **Prompt A**. Read the drafted invite aloud — "5 seconds, done."
- **0:30–1:00** — Paste the draft into a new **Gmail** message. Point out **"Add to Calendar"** appearing because a date/time is detected. Click it — event auto-fills.
- **1:00–1:30** — In the **Calendar** event **Add Google Meet video conferencing** link generated **Save**.
- **1:30–2:00** — **WOW:** "I never opened the calendar or typed a date twice." Then paste **Prompt B** in Gemini for instant agenda + prep. "And it just prepped the meeting too."

Prompt A — draft the invite (Gemini):

Write a short, friendly meeting invitation email.
Purpose: kick-off for our "AI in Our Lives" learning session.
Attendees: my team (5 people).
Proposed time: next Tuesday 3:00–3:45 PM.
Include: a one-line purpose, a 3-bullet agenda, and a line saying a Google Meet link is attached. Keep it under 120 words, warm but professional.

Prompt B — meeting prep (Gemini):

Create a 45-minute agenda for the session above with rough timings, 3 discussion questions to open the room, and a list of what I should prepare beforehand.

Say the caveat aloud: "On free, AI helps at each step but doesn't auto-coordinate across people — that's paid. Still removes most of the busywork. And don't paste confidential names into a free consumer AI."

Troubleshooting (this demo is the most fragile):

- *"Add to Calendar" doesn't appear* use Gmail's **"Help me write"** to refine, then create the event manually; still fast. OR reply to the pre-sent sample email, which triggers detection more reliably.
- *Anything stalls* play your **45-sec screen recording** and narrate over it. Strongly consider leading with the recording if the venue Wi-Fi is unknown.
- *Privacy* send the invite to yourself, not a real distribution list, on stage.

Transition to next: "Last one — and it's the crowd-pleaser. Let's make something visual."

DEMO 4 — Poster / EDM for THIS session (Slide 17) • Target 2:00

Setup state: Canva open. `demo-materials/demo4-poster-brief.md` prompt copied (with real date/venue filled in). Optional pre-made Ideogram poster in a tab.

Run (with timing cues):

- **0:00–0:20** — "Meta moment — let's make the poster for THIS session." Canva Poster **Design with AI.**
- **0:20–0:35** — Paste **Prompt A.** Generate.
- **0:35–1:10** — Layouts appear; pick one; it opens editable.
- **1:10–1:35** — **WOW:** live-edit the **date** (or a colour). "Try that with a flat JPG a designer emailed you."
- **1:35–2:00** — Mention EDM: "One click to **Resize** into an email header for a marketing email." (*If time*) flash the pre-made **Ideogram** poster: "Canva = editable & on-brand; Ideogram = artistic, text baked in."

Prompt A — Canva Magic Design:

Create a modern, eye-catching event poster (portrait) for a staff learning session.
Title: "Using AI in Our Lives"
Subtitle: "A hands-on 45-minute session — free tools only"
Details to include: Date [Fri 22 Aug], Time [3:00 PM], Venue [Training Room 2],
"Bring your laptop."
Style: clean, friendly, tech-forward; blue and teal palette; lots of white space;
one simple AI/lightbulb motif. Leave text fully editable.

Prompt B — Ideogram (text-in-image compare):

A vibrant, modern event poster with the bold headline text "USING AI IN OUR LIVES" clearly readable at the top, subtitle "Free tools, real results — 45-min session" below. Flat vector illustration style, blue and teal, a glowing lightbulb made of circuit lines, plenty of clean space. High legibility text.

Say the caveat aloud: "Proofread every letter — AI still misspells text in images — and free tiers usually forbid commercial use and may add a watermark."

Troubleshooting:

- *Generation slow/down* show pre-made Canva + Ideogram posters, explain the prompts.
- *Layout looks off* pick a different one from the set; "part of the workflow is choosing."

Transition out: "Four demos, four free tools, zero dollars. Let's wrap up with how to do this responsibly."

PART C — Presenter reminders

The 4 wow moments (land these):

1. Gamma theme-swap restyling the whole deck.

2. NotebookLM podcast of the audience's own notes.
3. The one-tap email calendar jump.
4. Live-editing the date on a finished poster.

Pacing discipline: each demo has a **2:00 target / 2:30 hard cap**. Watch the clock; the demos are where sessions overrun. If a demo misbehaves for >20 seconds, switch to the fallback and keep moving.

Recovery line if anything breaks: "This is a great reminder — AI is a fast first draft, not magic. Here's one I prepared earlier." (Switch to fallback tab.) Audiences love honesty; a graceful fallback beats a frozen screen.

Repeat throughout — the two rules: AI can be confidently wrong (verify what matters); free is not private (never paste confidential data).
