

Tutor Demo Guide

Click-by-Click Instructions · Using AI in Our Lives

"Using AI in Our Lives" — the most detailed, do-exactly-this walkthrough for the person running the demos

Who this is for: the presenter/tutor operating the laptop. This is the most granular of the three demo documents. It tells you **exactly what to click, what to type, what you should see, and what to do when it goes wrong** — step by micro-step, with a running clock.

Document map: high-level cues 05-demo-runbook-PRESENTER.md · audience follow-along 04-demo-runbook-AUDIENCE.md · slide script 01-presentation-with-speaker-notes.md · this file = the button-level script.

Legend: = click/action · = type/paste · = what you should see · = say this · = elapsed time · = if it breaks.

0. One-time setup the morning of (20 minutes)

0.1 Log in everywhere (and STAY logged in)

1. Open your browser. Create a dedicated **presentation window** with these tabs, left to right, in this order (matches demo order):
 - Tab 1 — `gamma.app` (signed in, on the dashboard)
 - Tab 2 — `notebooklm.google` (signed in; your prepared notebook open — see 0.2)
 - Tab 3 — `gemini.google.com` (signed in)
 - Tab 4 — `mail.google.com` (same Google account)
 - Tab 5 — `calendar.google.com` (same account)
 - Tab 6 — `canva.com` (signed in)
 - Tab 7 — Fallbacks folder (see 0.4)
2. Set browser zoom to **130%** (Ctrl/Cmd + a few times). Verify the back row can read a prompt box.
3. Turn on **Do Not Disturb** on the OS. Quit Slack, Teams, and personal mail popups.

0.2 Pre-build the NotebookLM notebook (Demo 2 — do NOT skip)

1. In Tab 2, click **Create new** **New notebook**.
2. **Add source** **Upload** choose `demo-materials/demo2-study-source.md` (or paste its text via **Copied text**).
3. Wait until the source shows a green/ready tick and a summary appears.
4. Open the **Studio** panel (right side) click **Audio Overview** **Generate**.

5. This takes ~**3–6 minutes**. Do it now, early. Leave it done and ready.
6. Once ready, click it once to confirm it plays, then **pause at 0:00** so it's cued.
7. (Optional but nice) Also click **Study guide** now so it's pre-made; you can regenerate live for effect or fall back to this.

0.3 Pre-send the Demo 3 email trigger (optional, improves reliability)

1. In Gmail (Tab 4), send yourself the sample "incoming email" from `demo-materials/demo3-email-scenario.md`.
2. Confirm it arrives. Replying to a dated email makes Gmail's "Add to Calendar" chip appear more reliably.

0.4 Build the fallback safety net (open each in Tab 7 or a folder)

- [] **Demo 1:** a finished Gamma deck you generated yesterday (open in a pinned tab).
- [] **Demo 2:** the **downloaded audio file** (Studio Download) + a screenshot of the quiz/study guide.
- [] **Demo 3:** a **45–60 sec screen recording** of the full email calendar Meet flow. (Most important fallback — record this.)
- [] **Demo 4:** one pre-made Canva poster + one pre-made Ideogram poster (screenshots or open designs).

0.5 Fill in the real details before you present

- [] In every poster/email prompt, replace `[Fri 22 Aug]`, `[3:00 PM]`, `[Training Room 2]` with real values.
- [] Decide the Demo 3 recipient = **yourself** (never a live distribution list on stage).

0.6 Final 2-minute rehearsal check

- [] Run the Gamma generate once on a throwaway to confirm your account has credits.
- [] Confirm the NotebookLM audio plays through the **room speakers** (not just laptop).
- [] Note your remaining NotebookLM free chats (50/day) — don't burn them rehearsing on the live account.

DEMO 1 — Messy notes a stunning deck (Gamma)

Appears on: Slide 9/11 · **Budget:** 2:00 (hard cap 2:30) · **Source:** `demo-materials/demo1-source-reading.md`

Before you switch to the demo

- Have `demo1-source-reading.md` open; select **everything below the --- line** and **copy** (Ctrl/Cmd+C).
- Bridge line from the slide: *"Enough theory — let's watch it happen."*

Step-by-step

	Action		Expect	Say
0:00	Switch to Tab 1 (Gamma) click Create new		The create menu opens	"I've got a page of the kind of messy notes we all scribble."
0:12	Choose Paste in text		A large paste box appears	"I'll paste my own notes so it uses my content, not invented facts."
0:18	Paste the notes into the box		Notes fill the box	—
0:25	Set Cards = 8, Tone = Professional & friendly (or default)		Options set	"I'll ask for 8 slides."
0:30	Paste the prompt (below) into the instructions/prompt field		Prompt visible	—
0:38	Click Generate / Continue		Progress animation starts	"Now watch — it's choosing layouts, writing headlines, pulling images."
0:38–1:15	<i>(keep talking while it works)</i>		Slides build one by one	Narrate what it's doing (don't go silent).
1:15	Scroll through 2–3 finished slides		A designed deck	"From a wall of text to this, in about 40 seconds."
1:35	Click Theme (top bar) pick a different theme		Whole deck restyles instantly	WOW: "One click restyles everything."
1:55	—		—	"I'd still verify facts and match our brand — minutes, not an afternoon."

PROMPT (paste into Gamma's instructions box):

Turn the notes I pasted into a clean, engaging 8-slide presentation for a general adult audience. Requirements:

- Slide 1: a punchy title slide with a one-line hook.
- One clear idea per slide, max 6 words per bullet, max 4 bullets per slide.
- Rewrite my rough notes into confident, plain-English headlines.
- Add one relevant image or icon per slide.
- End with a "3 things to try tonight" takeaway slide.
- Keep all facts strictly to what's in my notes; do not invent statistics.

If it breaks

- *Spinner stuck >20 sec* "While that thinks, here's one I made earlier" switch to the pre-made Gamma tab and scroll it.
- *Asks you to log in* you should already be logged in (setup 0.1); if not, switch straight to the fallback tab.
- *Output has a wrong fact* **use it:** "See — first draft, not final. This is exactly why we stay the editor."

Transition out: "That's AI helping us create. Now let's help us learn — for the students in the room."

DEMO 2 — Study notes quiz + podcast (NotebookLM)

Appears on: Slide 11/13 · **Budget:** 2:00 (hard cap 2:30) · **Prep:** audio already generated (setup 0.2)

Step-by-step

	Action	Expect	Say
0:00	Switch to Tab 2 (NotebookLM) — your prepared notebook	Source listed, Studio panel visible	"I've uploaded a reading on how memory works."
0:10	Click the source hover a sentence in an answer to show a citation	Citation chip / source highlight	"Every claim links to the exact line — that's why it doesn't make things up."
0:30	In Studio , click Quiz (or show the pre-made Study guide)	A quiz/study guide generates	"One click turns my notes into a self-test."
0:50	Read one quiz question aloud	Question on screen	Read it, pause. "Straight from my own material."
1:05	Click the chat box paste the prompt (below) Enter	A cited, structured self-test appears	"I can shape it too — harder questions, hidden answers, with citations."
1:25	Switch to Studio Audio Overview press Play	Two AI voices start	WOW: "This is the bit that gets people."
1:25–1:45	Let it play 15–20 seconds , then pause	Natural two-host chat	"Two AI hosts discussing <i>your</i> notes — revise on the bus."
1:55	—	—	"One rule: it only knows what you upload. Great sources in, great study out."

PROMPT (paste into the NotebookLM chat):

From my source, create a 5-question self-test that gets progressively harder, then hide the answers below a line so I can check myself afterwards. Focus on the concepts I'm most likely to be examined on, and cite the section each question comes from.

If it breaks

- *Audio won't play through speakers* play the **downloaded audio file** from Tab 7; if audio is dead entirely, describe it and show the quiz screenshot. Never let dead audio stall you >15 sec.
- *Chat says limit reached* you rehearsed on a different account (setup 0.6), so this shouldn't happen; if it does, show the pre-generated study guide instead.
- *Generation slow* talk over it; you have the pre-made study guide as instant backup.

Transition out: "Learning, handled. Now the thing that eats everyone's mornings — email and meetings."

DEMO 3 — Gmail + Calendar + Meet, end-to-end (free account)

Appears on: Slide 13/15 · **Budget:** 2:00 (hard cap 2:30) · **This is the fragile one — consider leading with the recording if Wi-Fi is unknown.**

Framing to say first

"Everything here works on a FREE personal account. The deep automation — matching five calendars, auto-transcription — is paid Workspace. I'll be clear about the line."

Step-by-step

	Action		Expect	Say
0:00	Switch to Tab 3 (Gemini) A Enter	paste Prompt	A drafted invite email appears	"First, I ask Gemini to write the invite."
0:15	Read the draft; Copy it		Clean <120-word invite	"Five seconds, done."
0:30	Switch to Tab 4 (Gmail) paste the draft	Compose	Draft in the compose window	—
0:45	Look for the "Add to Calendar" chip (because a date/time is present)		Chip appears below the email	"Because it names a time, Gmail offers this."
0:55	Click Add to Calendar		An event panel opens, pre-filled	WOW: "From the email's text to a real event — one tap."
1:10	Switch to Tab 5 (Calendar) open the new event Add Google Meet video conferencing		A Meet link is generated	"Now a video link, in one click."
1:20	Save confirm send invite		Event saved with Meet link	"Invite's out — I never typed the date twice."
1:35	Switch to Tab 3 (Gemini) B Enter	paste Prompt	An agenda + 3 questions appears	"And it just prepped the meeting for me too."
2:00	—		—	"On free it assists each step; full cross-calendar automation is paid."

PROMPT A (into Gemini):

Write a short, friendly meeting invitation email.
Purpose: kick-off for our "AI in Our Lives" learning session.
Attendees: my team (5 people).
Proposed time: next Tuesday 3:00–3:45 PM.
Include: a one-line purpose, a 3-bullet agenda, and a line saying a Google Meet link is attached. Keep it under 120 words, warm but professional.

PROMPT B (into Gemini):

Create a 45-minute agenda for the session above with rough timings, 3 discussion questions to open the room, and a list of what I should prepare beforehand.

If it breaks

- "Add to Calendar" chip doesn't appear Plan B: reply to the **pre-sent sample email** (setup 0.3), which triggers detection more reliably. Plan C: in Gmail click **Help me write** to refine, then create the event manually in Calendar — still fast, still on-message.
- Wi-Fi flaky / anything freezes play the **screen recording** and narrate over it. It's completely fine to lead with the recording and say "I recorded this earlier so we don't gamble on the venue Wi-Fi."
- Privacy slip only ever send to yourself on stage.

Transition out: *"Last demo — and it's the crowd-pleaser. Let's make something visual."*

DEMO 4 — Poster / EDM for THIS session (Canva)

Appears on: Slide 17/19 · **Budget:** 2:00 (hard cap 2:30) · **Source:**

[demo-materials/demo4-poster-brief.md](#)

Before you switch

- Have the **Canva prompt** (below, with real date/venue filled in) copied.
- Have the pre-made **Ideogram** poster open in a background tab for the compare.

Step-by-step

	Action		Expect	Say
0:00	Switch to Tab 6 (Canva) search "Poster" open Design with AI / Magic Design		AI design entry box	"Let's make the poster for THIS session — very meta."
0:15	Paste the prompt Generate		Several poster layouts appear	"I describe it in plain English."
0:40	Click a layout you like Edit	Customise /	It opens fully editable	"Notice — these are editable, not flat images."
1:00	Click the date text change it		Text updates live	WOW: "Try editing the date on a JPEG a designer emailed you."
1:20	(optional) change one colour to brand it		Colour updates	"One minute to on-brand."
1:35	Share/Download PNG or PDF; mention Resize "Email header"		Download starts	"And Resize turns this poster into the EDM email header."
1:50	Flash the pre-made Ideogram tab		Text-in-image poster	"Canva = editable & on-brand; Ideogram = artistic, but text is baked in."
2:00	—		—	"Whatever tool — proofread every letter. AI still misspells text in images."

PROMPT (into Canva Magic Design):

Create a modern, eye-catching event poster (portrait) for a staff learning session.
 Title: "Using AI in Our Lives"
 Subtitle: "A hands-on 45-minute session — free tools only"
 Details to include: Date [Fri 22 Aug], Time [3:00 PM], Venue [Training Room 2],
 "Bring your laptop."
 Style: clean, friendly, tech-forward; blue and teal palette; lots of white space;
 one simple AI/lightbulb motif. Leave text fully editable.

If it breaks

- *Generation slow/down* show the **pre-made Canva poster**; read the prompt aloud so they see the input output link.
- *Layouts look poor* pick a different option from the set: "Part of the workflow is choosing — you're the art director."
- *Misspelling in output* point at it: "And there's the classic AI text bug — always proofread."

Transition out: "Four demos, four free tools, zero dollars. Let's wrap up with how to do all this responsibly."

5. Master timing & the four "wow" beats

Demo	Slide	Target	Hard cap	The one beat to land
1 Gamma	9/11	2:00	2:30	Theme-swap restyles the whole deck
2 NotebookLM	11/13	2:00	2:30	The podcast of the audience's own notes
3 Gmail+Cal+Meet	13/15	2:00	2:30	Email text real event in one tap
4 Canva	17/19	2:00	2:30	Live-editing the date on a finished poster

Total live demo budget 8 minutes.

Universal recovery script (memorise this one line)

"This is a perfect reminder — AI is a fast first draft, not magic. Here's one I prepared earlier."
switch to the fallback tab keep moving. A graceful fallback beats a frozen screen every time;
audiences respect the honesty.

Golden rules to repeat during demos

1. **AI can be confidently wrong** — verify anything that matters.
2. **Free is not private** — never paste passwords, IDs, or confidential data on stage.
3. **Watch the clock** — if a demo misbehaves for more than ~20 seconds, go to the fallback.
